Jakarta, Indonesia

I am a Computer Science graduate from the Faculty of Information Technology with a strong passion for technology, innovation, and continuous self-development, experienced in web development and software engineering projects that strengthened my skills in programming, system analysis, and building impactful digital solutions, as well as hands-on IT support including Windows installation, hardware/software troubleshooting, system configuration, and basic networking, with the ability to work both independently and collaboratively using strong analytical thinking, problem-solving, and effective communication skills.

My Projects

Warkop Sudi Mampir <i>Fullstack Web Developer</i> Web-based application developed to support daily business operations of a small coffee shop (Warkop Sudi Mampir), focusing on sales tracking, inventory management, and financial reporting to improve efficiency and decision-making. - Developed a web-based dashboard for sales and inventory management using Next.js and Tailwind CSS - Implemented features for recording daily transactions and tracking product stock in real-time - Built inventory management system with stock status indicators (available, low stock, out of stock) - Created interactive sales visualization (charts) for monitoring business performance - Added filtering functionality (daily, weekly, monthly) and export to Excel for reporting - Designed responsive and user-friendly UI for efficient business operations	Feb 2026
Wedding Invitation Website <i>Fullstack Web Developer</i> Developed a fullstack web-based wedding invitation platform featuring a modern, responsive design and interactive user experience. The application enables guests to access event details, confirm attendance (RSVP), send messages, and view multimedia content seamlessly. - Front-End Design & Development: Built the interface using Next.js and Tailwind CSS to create a responsive, modern, and aesthetically pleasing design. - Online RSVP Feature: Integrated the RSVP form with real-time data storage to simplify guest confirmation. - Photo Gallery & Stories: Provided dedicated pages for photo galleries and couples' stories, with subtle animations to enhance the user experience. - Location Map Integration: Embedded the Google Maps API to easily locate the event. - Testing & Feedback: Tested on various devices to ensure compatibility and accessibility. - Impact: Provided a practical, cost-effective, and environmentally friendly solution for wedding invitations, while enhancing guest engagement through digital media.	Sep 2025
17 August Competition Website (RT/RW Level) <i>Fullstack Web Developer</i> A digital event management platform for Indonesia's Independence Day neighborhood competitions, developed to streamline coordination and enhance engagement. Built using modern web technologies with a clean, responsive UI and full admin capabilities. - Developed a full-stack web platform using React.js, Tailwind CSS, Node.js, and MongoDB to manage Indonesia's Independence Day neighborhood competitions. - Built an admin panel for managing participants, tournaments, and event outcomes (qualified, winners, disqualified). - Implemented real-time monitoring for competition progress and participant status. - Designed a responsive and user-friendly interface to ensure accessibility across devices. - Deployed the application on Vercel, ensuring high availability and scalability.	Aug 2025
Model Prototipe Intervensi Kesehatan Mental Berbasis Web untuk Remaja Dewasa di Indonesia dengan Pendekatan internet-based Cognitive Behavioral Therapy (i-CBT) - Universitas YARSI - Fakultas Psikologi & Teknologi Informasi <i>Fullstack Web Developer</i> In this project, I developed a prototype web-based mental health intervention platform aimed at supporting the mental health of adolescents and young adults in Indonesia. The platform adapts Cognitive Behavioral Therapy (CBT) techniques into an online format, known as i-CBT (internet-based CBT). The platform aims to reduce barriers to accessing mental health services, such as social stigma and limited access to professionals. Through an interactive and user-friendly approach, the platform provides education, therapeutic resources, and practical tools that users can use independently. - Designed responsive front-end using Bootstrap, HTML, CSS, and JavaScript - Developed backend using Python (Flask) for authentication, data processing, and dynamic content	Aug 2024 - Jan 2025

- Implemented MongoDB for data storage and CRUD operations (user & therapy sessions)
- Integrated Cognitive Behavioral Therapy (CBT) concepts into the platform with expert collaboration
- Conducted user testing to improve usability and platform effectiveness
- Delivered functional web-based prototype on time
- Collaborated with psychology expert to translate therapy into digital platform
- Built scalable backend architecture using Flask and MongoDB
- Developed accessible mental health platform for young adults
- Increased mental health awareness through interactive features
- Received positive user feedback on usability and engagement
- Continuously improved system based on user feedback

MSIB Studi Independent by Educourse PT Maleo Edukasi Teknologi - Pt Maleo Edukasi Teknologi (Educourse.id)

Jan 2024 - Jun 2024

Platform And Web Developer (Specialist Education Platform)

Participated in the MSIB Independent Study program as a Platform and Web Developer at PT Maleo Edukasi Teknologi (Educourse.id), focusing on full-stack web development for education platforms. Gained hands-on experience in building responsive and interactive web applications using modern front-end and back-end technologies, including HTML, CSS, JavaScript, React, Python (Django), and database management.

The program emphasized project-based learning, design thinking, and collaborative development, culminating in the development of an end-to-end educational platform featuring user authentication, content management, interactive elements, and data-driven insights.

- Developed responsive web interfaces using HTML, CSS, JavaScript, and React, ensuring cross-device compatibility and optimal user experience.
- Built and integrated back-end systems using Python (Django) and Node.js, including RESTful APIs and database management (MySQL/MongoDB).
- Implemented user authentication and authorization features (login, registration, session management) for secure platform access.
- Designed and developed a fullstack educational platform as a capstone project, integrating front-end, back-end, and database systems.
- Applied design thinking methodology to identify user needs and create innovative solutions in the education technology domain.
- Created interactive features and applied basic gamification elements to improve user engagement and learning experience.
- Utilized Content Management System (CMS) concepts to manage and organize educational content efficiently.
- Performed data analysis and visualization to support insights and decision-making within the platform.
- Collaborated in team-based projects through discussions, presentations, and peer reviews, improving communication and problem-solving skills.
- Participated in intensive project-based learning, including self-learning, live lectures, and group projects, culminating in a final presentation.

Education

Universitas YARSI - Jakarta, Indonesia

Aug 2021 - Apr 2025

Bachelor of Computer Science, 3.61/4.00

Organizational experience

Karang Taruna

Aug 2019 - Present

Member

Actively engaged in environmental conservation through community-based activities, including organizing Independence Day competitions on August 17th to foster community spirit and promote awareness of sustainability. These initiatives combine fun and education to encourage residents to contribute to a cleaner, greener environment.

Projects, Skills, and Certificates

- **Projects** (2024): (Instagram Unfollowers Checker Tool): I developed a tool that can identify Instagram accounts that don't follow back, utilizing official data exported from Meta (Instagram). The tool processes JSON data containing a user's followers and followings, then analyzes and compares the two to generate a list of accounts that don't follow back. This feature helps users gain a clear picture of their account engagement, allowing them to manage their connections more effectively.
- **Skills**: Effective Communication, Ability to Adapt to Technological Developments, Analytical Thinking, Teamwork and Collaboration, Perseverance and Enthusiasm for Learning, Problem Solving.
- **Hard Skills**: Programming and Coding, Full-Stack Web Development Branding Identity UI Design Prototyping Collaboration and Project Management Skills
- **Achievements** (2025): Graduated with Cumlaude honors
- **Achievements** (2024): Successful completion of an Endorsed STEM Program, demonstrating mastery of fundamental skills and knowledge in Science, Technology, Engineering, and Mathematics.

- **Achievements**  (2023): Participate in the Ai, Mobile, and IOT Track interest exhibition track
- **Achievements**  (2023): CCNAv7: Introduction to Networks through the Cisco Networking Academy program
- **Achievements**  (2022): Introduction to Cybersecurity through the Cisco Networking Academy program
